

GESIS Study number ZA9128

EUROBAROMETER 103.3

Carried out by Verian on request of the EUROPEAN COMMISSION, Directorate-General Communication (COMM.B.3.: Public Opinion and Citizens Engagement), between March 26 and April 22, 2025.

Archive pre-release, dataset version 1.0.0 as of June 16, 2026

This dataset edition has not yet passed the complete archive processing and documentation, such as complete variable documentation for online data browsing in the GESIS search (<https://search.gesis.org>). Basic archival checks have been performed; technical variables, protocol variables and variable labels have been adapted to archive standards for the EUROBAROMETER series.

Proposed citation

European Commission, Brussels: Eurobarometer 103.3, March-April 2025. Verian, Brussels [Producer];

Survey instruments

For question wording, answer category text, interviewer instructions or question routing, please see the BASIC BILINGUAL QUESTIONNAIRE and the respective national field questionnaires. The basic questionnaire also includes a technical description of this EUROBAROMETER survey.

The national field questionnaires in the different language versions are available through the Eurobarometer study descriptions in the data holding catalogue, as soon as all embargos have been lifted, if applicable.

Weighting information

In general, the Standard and Special Eurobarometer datasets provide for two types of weighting, a post-stratification weighting and a population size weighting.

For each sample (country or lower-level region) through the **post-stratification weighting** procedure a comparison is carried out between the sample composition and a proper universe description. The universe description is made available by the National Survey Research Institutes and/or by EUROSTAT. On this basis a national weighting procedure, using marginal and intercellular weighting, is applied. As such in all countries, minimum sex, age, region NUTS II (basic regions as defined by the EUROSTAT nomenclature of territorial units for statistics), and size of locality are

introduced in the iteration procedure. This post-stratification weighting is also referred to as redressment or non-response weighting. A design weight which would adjust for unequal selection probabilities (depending on the household size) is not made available.

The **population size weighting** factor corrects for the fact that most samples are of almost identical size, no matter how large or small the populations are from which they were drawn. These weights ensure that each country as well as each lower level sample (East and West Germany) are represented in proportion to its population size within different country/sample groupings, or according to the historical states of European unification (e.g. founder members, new members, Euro zone) in the case of the EUROPEAN WEIGHTS, or within the whole country in the case of Germany (WEIGHT SPECIAL GERMANY).

The **population size weights** all include the post-stratification weighting factors. The EUROPEAN WEIGHTs adjust each sample in proportion to its share in the total population aged 15 and over of the European Union (formerly European Community) or in accordance with its historical compositions. These adjustments are based on population figures published by EUROSTAT in the Regional Statistics Yearbook. Between Eurobarometer 33 and 54.1 adjustments to the predefined standard sample size is taken into account. In general, all samples which do not belong to the respective group of countries/samples under consideration are excluded from calculation. Starting with Eurobarometer 95.2, these weights regularly also adjust the East and the West German samples to their respective proportions in the united Germany.

The application of post-stratification weights is **recommended for descriptive (univariate) analysis**. Meaningful descriptive results for groups of countries or for countries with separate samples (Germany) require population size weighting. Official Eurobarometer reports are always based on weighted data.

The following weights are provided for Eurobarometer 103.3:

W1 (WEIGHT RESULT FROM TARGET) reproduces the real number of cases for each country. East and West German samples are weighted separately. This weight in its function corresponds to former NATION WEIGHT II (until EUROBAROMETER 31). **W1DE** (WEIGHT RESULT FROM TARGET GERMANY) is based on W1 and adjusts the East and the West German samples to their respective proportions in the united Germany. This weight should be used whenever the united Germany is to be analysed as a whole.

W22 (WEIGHT EU27) includes all 25 member countries after the 2004 enlargement, and the new members as of 2007 Romania and Bulgaria.

W14 (WEIGHT EU25) refers to the EU member countries as of the 2004 enlargement; **W13** (WEIGHT EU NMS 10) to the group of the ten new members at times. In both cases all other samples are excluded from calculation.

W11 (WEIGHT EU15) refers to the EU members after the 1995 enlargement. All other samples are excluded from calculation; **W10** (WEIGHT EU NMS 3) separates the three new members at times.

W9 (WEIGHT EU12+) includes East Germany; **W7** (WEIGHT EU10) in addition excludes Spain and Portugal (enlargement 1986; **W6** (WEIGHT EU9) also excludes Greece (enlargement 1981), and the latter two exclude East Germany.

W5 (WEIGHT EU6) refers to the six EC founder members: France, Belgium, the Netherlands, West Germany, Italy, and Luxembourg. All other samples are excluded from calculation.

W95 (WEIGHT EU CC4) refers to a subgroup of all candidate countries at the time of the fieldwork, i.e. Tuerkiye, North Macedonia, Montenegro and Serbia. In each case all other samples are excluded from calculation.

W23 (EU28) refers to the EU28 countries (EU27 plus Croatia; membership as of July 2013); **W94** (WEIGHT EU NMS 13) groups the 13 new member countries for the enlargement period 2004 to 2013.

W97 (WEIGHT EU CC BALKANS) separates the group of Balkan Candidate Countries North Macedonia, Montenegro, Serbia, Albania and Bosnia & Herzegovina (in w97 starting with EB 99.4). All other samples are excluded from calculation.

W92 (WEIGHT TOTAL) refers to the total of all countries / samples as a whole, i.e. EU27 plus the eight Candidate Countries (**W150**), the Turkish Cypriot Community (Northern Cyprus), Kosovo and the United Kingdom.

W100 (WEIGHT EU CC5) refers to the Candidate Countries as of March 2015, i.e. Tuerkiye, North Macedonia, Montenegro, Serbia and Albania. **W120** (WEIGHT EU CC6) includes Tuerkiye, North Macedonia, Montenegro, Moldova, Serbia and Albania. **W121** (WEIGHT EU CC7) includes Tuerkiye, Bosnia & Herzegovina, North Macedonia, Montenegro, Moldova, Serbia and Albania. **W150** (WEIGHT EU CC8) includes Tuerkiye, Bosnia & Herzegovina, North Macedonia, Montenegro, Moldova, Serbia, Albania and Georgia.

W85 (WEIGHT EURO ZONE 20 EU27B) adds CROATIA to the group of EURO zone countries as of January 2023. **W86** (WEIGHT NON-EURO ZONE 20 EU27B) references the EU27B countries which as of January 2023 did not introduce the common currency. **W87** refers to the EU28 countries minus the United Kingdom (i.e. the EU27B).

Remarks about this dataset version

- Modules QA to QD in the standard Eurobarometer context and largely replicating questions asked in the context of Eurobarometer 102.2 (ZA8905) and Eurobarometer 101.3 (ZA8843).
- Starting with Eurobarometer 89.2 no separate sample is drawn for Northern Ireland, which is now covered by the sample for the United Kingdom. Accordingly, the formerly available weight variable w4 "WEIGHT UNITED KINGDOM" is obsolete and no longer included in the dataset.
- The names of several demographic variables have been changed to the Eurobarometer series standard.

- Data for protocol variables p8 (postal code), p9 (sample point number), and p10 (interviewer number) have not been made available.
- The fieldwork dates implied by the values in protocol variable p1 differ from those indicated in the technical specifications provided by Verian for several countries.
- Please note that Switzerland, Iceland and Norway are listed in question q1 (“NATIONALITY: ...”) but have not been surveyed in Eurobarometer 103.3.
- 10 respondents had to be removed from the dataset due to a re-identification potential. This implies slight deviations from the results presented in the official report and the Excel volumes.
- For variables qa3 (“IMPORTANT ISSUES CNTRY”), qa4 (“IMPORTANT ISSUES PERS”), qa5 (“IMPORTANT ISSUES EU”), qa6 (“TRUST IN INSTITUTIONS”), qa7 (“EU CONCEPT”), qb2 (“EU PROPOSALS”), qb9a/b (“EU ACTION W SHORT TERM LIFE IMPACT”), qb14 (“VIEW ABOUT”), qb16a/b (“EU BUDGET”), qc3a/b (“MOST POSITIVE RESULT OF THE EU/POSITIVE RESULT OF THE EU”), qc5 (“IMPORTANT VALUES PERS”), qc6 (“IMPORTANT VALUES EU”), qd2 (“EU RESPONSE TO UKRAINE INVASION AGREEMENT”), qd3 (“STATEMENTS”), d63 (“SOCIAL CLASS - SELF-ASSESSMENT (5 CAT)”) the numbering of the answer categories in the dataset diverges from that in the questionnaire. Verian has confirmed that the data are correct.
- Summarized variable sd20a_t6 (“EU KNOWLEDGE - AT LEAST ONE WRONG ANSWER”) was corrected by GESIS recoding respondents with no wrong answer to code “0” (“[NOT THE CASE]”). This implies deviations between the dataset and results of the official report and tabular volumes.
- Please note that 1066 respondents report to be “Student” in d15a (“OCCUPATION OF RESPONDENT”) and at the same time gave answers other than “Still studying” in d8 (“AGE EDUCATION”). This conforms to the official Excel volumes.
- Please note that variable d9a (“EDUCATION LEVEL: ...”) (named d8c in the basic questionnaire) has been harmonized by Verian for all countries, which corresponds to the results in the official tabular volumes. See the country questionnaires for the country-specific education level categories.
- For reasons of preserving anonymity answer categories 3 and 4 of variable d10 (“GENDER”) have been collapsed by GESIS.
- Variables d8r1 (“AGE EDUCATION (RECODED 11 CAT)”) and netuse (“INTERNET USE (INDEX)”) have been derived by GESIS.
- Please note that several region variables were changed in Eurobarometer 99.2. This is especially true for France, Hungary, Poland, and Croatia.
- Please note that category 2 (“Towns/suburbs”) in protocol variable p6 (“SIZE OF COMMUNITY”) is not used in Bosnia and Herzegovina, Cyprus (TCC), Georgia, Kosovo, Moldova and Tuerkiye.

- Checks for duplicate case identification numbers and cases have been performed: The case ids are unique, and a unique serial id across all countries (variable “serialid”) was generated by GESIS. The dataset has been checked for duplicate cases on the base of 64 selected non-technical (substantial) variables.
